MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

JANUARY 1936

TEMPERATURE

January mean temperatures were generally above normal from the Atlantic coast westward to the Ontario-Quebec boundary, in southern and central British Columbia, on Vancouver Island, and in the Yukon River valley. Elsewhere in Canada mean temperatures were reported to be below normal.

On Vancouver Island excesses of two or three degrees were reported. Along the coast of the mainland temperature ranged from five degrees above normal in the south to one degree below in the north. In the southern interior valleys excesses of three or four degrees were reported while the northern section of the province was well below normal.

In Alberta the month was very cold in the Peace and Athabaska River valleys where there were deficiencies of six to twelve degrees. In the agricultural region about Edmonton temperatures were seven to nine degrees below normal. In the Red Deer and South Saskatchewan River valleys deficiencies of three to five degrees were reported. From Calgary southward to the International Boundary temperatures were normal to three degrees below but four to seven degrees below normal in the Bow and Milk River districts.

Throughout Saskatchewan the January temperatures were well below normal. In the central portion of the agricultural region and along the North Saskatchewan deficiencies of six to nine degrees were reported. Northwards towards the Churchill River deficiencies of six to nine degrees were indicated. Along the South Saskatchewan temperatures were six to eight degrees below normal and ten to eleven degrees immediately to the east of Saskatoon. In the Swift Current and Wood Mountain regions there were deficiencies of two to five degrees, while in the Qu'Appelle River valley and southward to the International Boundary temperatures were six to twelve degrees below normal.

In the agricultural region of Manitoba there were deficiencies of nine to thirteen degrees. In the lake region deficiencies of seven to ten degrees were reported and slightly less northward toward Hudson Bay.

In Ontario from the Lake of the Woods eastward to Lake Superior temperatures were three to eight degrees below normal and one to four degrees from Lake Superior northward to the Albany River. Along the Moose and Abitibi Rivers temperatures were two to four degrees below normal and four to five degrees in the region of Lake Temiskaming. In the southern portion of Algoma and Sudbury districts and eastward to the Upper Ottawa River temperatures were normal or slightly below. On Manitoulin Island there were deficiencies of three or four degrees. Immediately along the shore of Lake Ontario the temperature was practically normal. Elsewhere in southern Ontario there were generally deficiencies of one or two degrees except in Middlesex and Lambton counties and in the extreme southwestern tip of the province where deficiencies of three to five degrees occurred.

In Quebec the region immediately east of Lake Temiskaming and along the Upper Ottawa River was slightly below normal as were the valleys of the Richelieu and Chaudiere Rivers. The remainder of the province had mean temperatures above normal. The greater part of the Laurentian Hills were normal to three degrees above. The Lake St. John region had temperatures three to five degrees above normal. Along the Upper and Middle St. Lawrence River temperatures were normal to two degrees above with a few local exceptions. Along the Lower St. Lawrence and north shore of the Gulf mean temperatures were four to eight degrees above average.

January temperatures were above normal throughout the Atlantic Provinces. In New Brunswick excesses were of the order of two to four degrees generally; the largest excesses occurring along the lower Nepisiquit and Miramichi Rivers. Mean temperatures were two degrees above normal along the Basin of Minas in Nova Scotia. The southwestern part of the province was generally one degree above normal, while the eastern districts with Cape Breton Island had excess of three to five degrees. On Prince Edward Island an excess of four degrees was reported.

Southern Newfoundland was generally reported to be three degrees above normal but seven degrees in the north.

January temperatures were reported to be two to eight degrees above normal along Hudson Strait and two to six degrees below normal along the west coast of Hudson Bay.

PRECIPITATION

On Vancouver Island precipitation was above normal along the outer coast and on the southern tip. Along the inner channel there were slight deficiencies. On the northern stretch of the coast of the mainland reports indicate deficiencies of about 25% or more. In the Lower Fraser River valley precipitation was 15 to 30% above normal and 50 to 70% along the Upper Fraser and Thompson Rivers. Along the Okanagan River there were excesses of 35% generally while in the Kootenay valley precipitation was normal or slightly below.

In the Peace and Athabaska River districts in Alberta the precipitation averaged about 40% above normal. In the agricultural region from Edmonton to Olds and eastward to the Saskatchewan boundary precipitation was normal to three times the normal amount. In the southern Red Deer and in the Bow and South Saskatchewan River valleys there were excesses of 20 to 100%. In the Oldman River valley excesses averaged about 30% and deficiencies 10% in the St. Mary River valley.

In Saskatchewan immediately north of the International Boundary there were small deficiencies. In the grain growing district about Swift Current, Moose Jaw and Regina excesses of 50 to 150% occurred. The region about Kindersley and Outlook was generally 15 to 40% below normal and along the North Saskatchewan precipitation was variable, ranging from 75% below to 75% above normal. That section of the province from Quill Lake to Kamsack was 15 to 35% below normal.

The southwestern agricultural region of Manitoba had generally 25 to 35% more than normal precipitation. In the Red River valley there were excesses of 75% or more. The northern lake region appeared to have had normal precipitation or slightly less.

In Ontario in the Lake of the Woods and Rainy River region there were excesses of about 20%. From Lake Superior northward towards the Albany River deficiencies of about 50% were reported. Cochrane and Temiskaming districts together with the northern portion of Sudbury district and the southern portion of Algoma district were above normal by 30 to 60%. Along the north shore of the Georgian Bay small deficiencies were reported. In the region of the Lower Lakes, the Lower Ottawa and Upper St. Lawrence valleys the precipitation was generally about 20% below the normal. Exceptions occurred in the region about Haliburton, in the eastern Lake Erie counties, and on the Lake Huron shore where there were local excesses.

In Quebec precipitation was generally above normal except along the Middle and Upper Ottawa River where there were deficiencies of 10 to 30%. South of the St. Lawrence River precipitation was normal to twice the normal amount. From the Middle and Upper St. Lawrence northward through the Laurentian hills precipitation was 15 to 85% above normal or 40% generally. In the Lake St. John region there were excesses of about 50%. Precipitation was moderately above normal along the Lower St. Lawrence and the north shore of the Gulf.

Precipitation was above normal throughout the Atlantic provinces. Northern New Brunswick had nearly twice the normal amount. South of the Miramichi River there were excesses of 20 to 70% above normal precipitation and 30% generally.

In Nova Scotia precipitation was about 70% above normal along Chignecto Bay and the Basin of Minas. In the remainder of the province it was about 25% above normal except near Halifax where the excess was about 50%.

Prince Edward Island was 45% above normal.

Southeastern Newfoundland was about 20% above normal while available reports indicate that the remainder of Newfoundland had below normal precipitation.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Sg denotes depth of snow on ground in inches, where given.
